Change Management
Creating an organized sheet to document progress
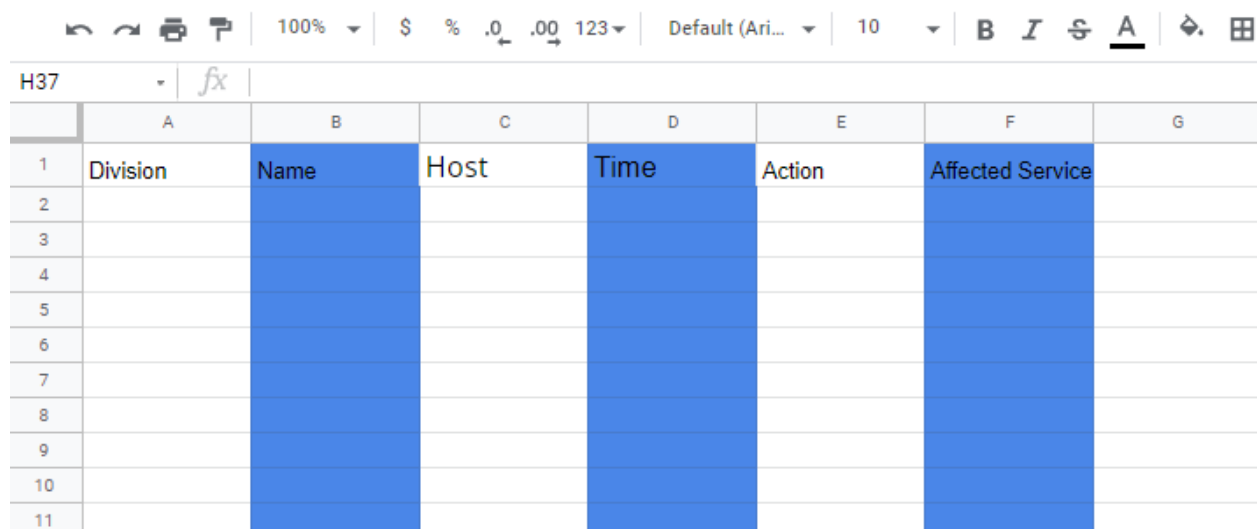

Type of systems: All hosts on the network except networking equipment.
Necessary Skills: Basic Linux and Windows command-line

Complete goal: Provide documentation on all changes made to all systems within scope. This documentation will be useful for future injects and for tracking the overall progress of hardening security.

Steps:
1. Things that need to be logged:
   a. Host, time, action, affected services
2. Create a google sheets document
   a. It should resemble this:
      i. Change Management Guide - Google Sheets
